

System Architecture & Data Flow

Indexing pipeline (top) and query pipeline (below) both read from / write to the shared storage on the right.

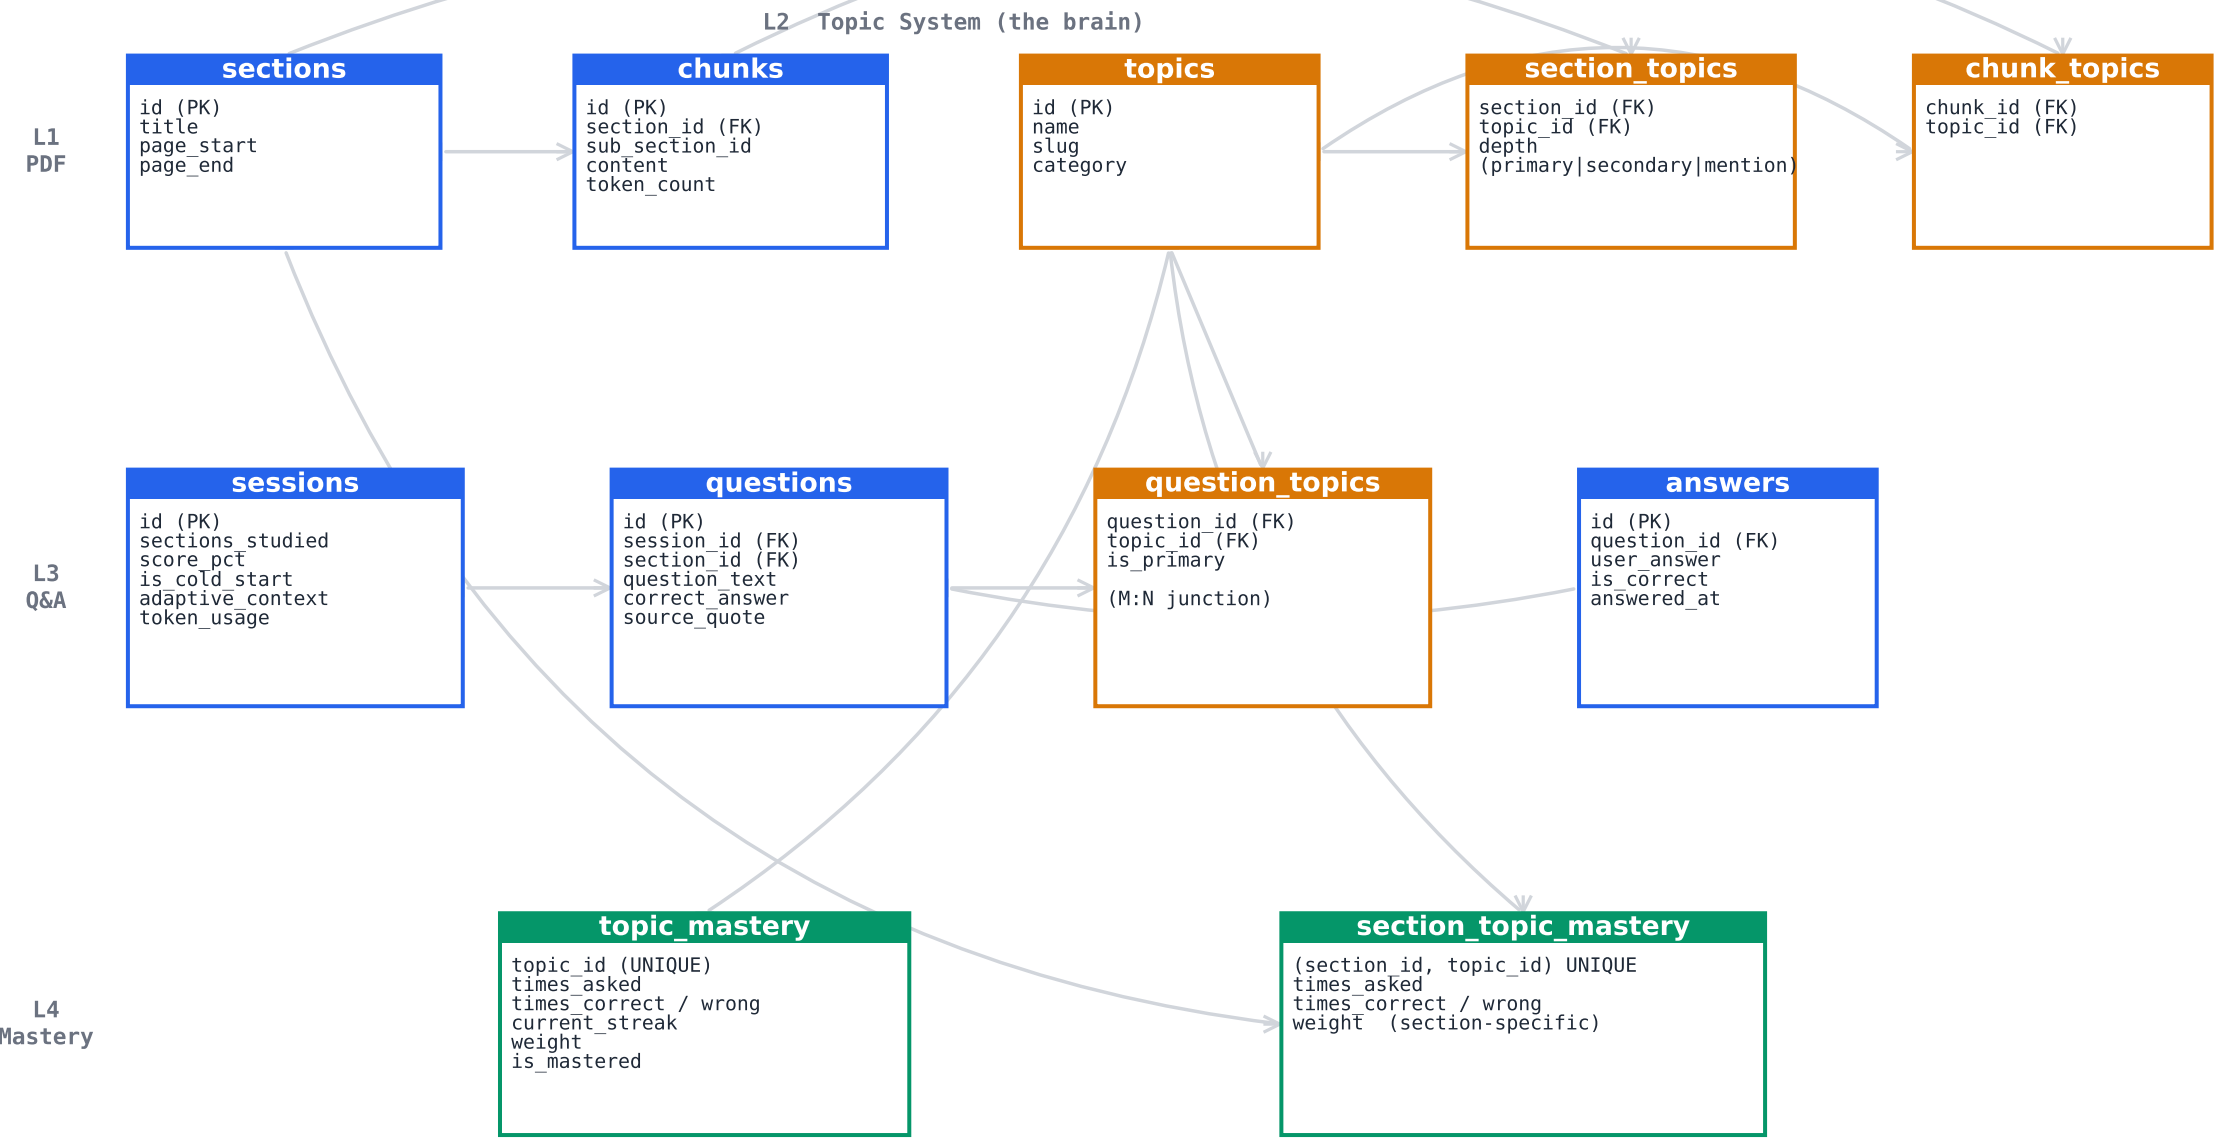

Solid arrows = pipeline data flow. Dashed green = storage read / write. Dashed red = adaptive feedback across sessions.

Knowledge Base Schema (ER Diagram)

11 tables connected by relationships. Crow's-foot = many; single bar = one.

LEGEND

Topic is a first-class entity (ID, slug, category) — never a string. Many-to-many junction tables (section_topics, chunk_topics, question_topics) make cross-section adaptive logic possible.
